

# SureSmile® Aligner

## Class I - Crowding, Deep Bite

Case Study #01

Courtesy of Dr. Ed Lin

**Age:** 17 years old **Gender:** Female

### Patient Primary Concern

She does not like her smile and crowding

### Diagnosis

- Slightly asymmetric MX and MD arches
- Mild MX crowding, moderate MD crowding
- Moderate deep bite with uneven incisal edges

**Treatment Duration:** 4.25 Months **U:** 8 **L:** 11

### Treatment Plan

- Move U4-4 and L4-4 to resolve crowding
- Perform IPR for distal of L4-4 and correct all rotations
- Parallel crowns and level incisal edges

### Results

- Achieved correction of MX and MD crowding
- Achieved MX and MD arch symmetry
- Leveled MD curve of spee with intrusion of L 3-3 to open bite
- Leveled MX and MD incisal edges
